Claim Rejections - 35 USC § 102

1. Claims 11-14 are rejected under 35 U.S.C. 102(b) as being anticipated by Ives et al (6,198,958).

Ives is considered to teach all of the structure of the above claims.

Claim Rejections - 35 USC § 103

2. Claims 1-10,15-21 are rejected under 35 U.S.C. 103(a) as being unpatentable over Ives et al (6,198,958).

The method steps of the above claims are considered to follow obviously from the normal workings of the Ives device. Column 1 of Ives teaches that fMRI is commonly used in the art. Such procedure, as is known, allows for the patient to perform a certain function, and to locate the corresponding area in the brain responsible for the function. Column 5 also teaches that precise location of the specific area of the brain to be treated can be located accurately. Column 4 teaches functional brain maps are produced for patients with any type of cognitive disorder. Re claim 5, to use a control group to determine how different subjects respond to treatment is common in the art, and the terms 'at rest' as well as 'sleep-deprived' are very broad terms that apply to a wide variety of patients. Further, to store a plurality of maps would have been obvious since such is commonly done during fMRI to allow for efficient operation of the procedure so that the patient's history of cognitive function can be readily ascertained.
